Address: Binh Thanh, Ho Chi Minh City, Viet Nam
Phone: 0969125574
Linkedin: Lam Duc Thinh

Summary

- Backend-oriented software engineer with 1 year of combined internship and professional experience building RESTful APIs and full-stack applications using **Node.js**, **NestJS**, **TypeScript**, PostgreSQL, MongoDB, and Redis. Familiar with authentication, payment integration, real-time systems, database optimization, testing, Agile collaboration, and AI-assisted development using **Codex** and **OpenCode**. Seeking a Backend Developer position.

Education

- **FPT University** Sep 2021 - Oct 2025
  Software Engineering; GPA: 8.46/10 — English: Intermediate

Skills Summary

- **Languages**: JavaScript, TypeScript, SQL
- **Backend**: Node.js, NestJS, ExpressJS, RESTful API, JWT, OAuth2
- **Frontend**: ReactJS, HTML/CSS
- **Databases**: PostgreSQL, MongoDB, SQL Server, Redis
- **Tools**: Git, GitHub, Docker, Postman, Swagger
- **Integrations**: Socket.IO, gRPC, Stripe, Cloudinary, SePay
- **AI-Assisted Development**: Codex, OpenCode, Cursor
- **Practices**: Agile/Scrum, Unit Testing, Integration Testing, Code Review, Problem-solving

Experience

- **CT Group** April 2026 - Oct 2026
  Fullstack Developer
  - **Development**: Contributed to developing and maintaining backend features using **Node.js**, **NestJS**, **TypeScript**, and RESTful APIs, including request validation, database operations, authentication, error handling, and debugging. Supported frontend tasks using **ReactJS**, including API integration, reusable components, and loading, error, and form states.
  - **AI-Assisted Development**: Used approved AI tools such as **Codex** and **OpenCode** to research business domains, understand internal documentation and existing codebases, break down tasks, investigate bugs, refactor code, and prepare test cases. Manually reviewed and validated AI-generated code before integration.
  - **Collaboration**: Worked with Git-based workflows, code reviews, debugging sessions, task discussions, and Agile/Scrum practices under senior developer guidance.
  - **Tech Stack**: Node.js, NestJS, TypeScript, ReactJS, RESTful API, PostgreSQL, MongoDB, Redis, Git, Docker
- **UTA Solution (Internship)** Aug 2024 - Dec 2024
  Fullstack Developer
  - **Development**: Developed and maintained features for both frontend and backend using ReactJS, Node.js, ExpressJS
  - **Workflow**: Applied Agile/Scrum methodology in real-world team environment
  - **Collaboration**: Managed source code and collaborated using Git
  - **Tech Stack**: ReactJS, Node.js, ExpressJS, HTML/CSS, RESTful API

Projects

- **Ticket Booking (Solo Project)** 2026 - Present
  Backend-oriented Fullstack Developer
  - **Description**: Built a full-stack movie ticket booking platform using **NestJS**, **React/Vite**, **PostgreSQL**, **Prisma**, and **Redis**. Implemented seat reservation with Redis TTL locks and PostgreSQL transactions, **JWT** authentication, **TMDB** movie import, **SePay** QR payment, webhook reconciliation, booking expiration, and digital ticket issuance.
  - **Performance**: Applied cursor-based pagination, composite indexes, selective Prisma queries, batch inserts, and grouped updates. In a local benchmark with 100K synthetic bookings, reduced deep-pagination median latency by **95.15%**, seat price update queries by **95.9%**, and bulk scheduling database operations by **79.17%**.
  - **GitHub**: ThinhLam2404/ticket-booking
  - **Demo**: Ticket Booking
  - **Tech Stack**: **NestJS**, **ReactJS**, **TypeScript**, **PostgreSQL**, **Prisma**, **Redis**, **JWT**, **SePay**, Docker, **Swagger**

- **Einvoice (Solo Project)** Nov 2025 - Jan 2026
  Backend Focus
  - **Description**: Engineered a scalable, high-availability invoice management system using a **Microservices** architecture within an **Nx monorepo**. Orchestrated seamless communication between services using **gRPC** for authorization, **TCP** for core logic, and **Kafka** for event-driven asynchronous processing (e.g., mail). Implemented **Keycloak** authentication, **Puppeteer** PDF generation, **Stripe** payment, and **Cloudinary** media management .
  - **GitHub**:
  - Frontend: ThinhLam2404/einvoice-fe
  - Backend: ThinhLam2404/envoice
  - **Tech Stack**: NestJS, Nx, Microservices (TCP/gRPC), Kafka, MongoDB, PostgreSQL, Redis, Keycloak, Puppeteer, Stripe, Cloudinary
- **Textenger (Solo Project)** Jan 2026 - Feb 2026
  Backend Focus
  - **Description**: Engineered a robust real-time chat infrastructure using **NestJS** and **Socket.io**, optimized for high-concurrency message delivery and interactive user status tracking. Implemented a modular backend architecture to ensure system scalability, integrating **Mongoose** for efficient handling of complex conversation schemas and **Cache-Manager** to reduce database load. Secured the ecosystem with a multi-layered authentication strategy featuring **Google OAuth** and **JWT** session management.
  - **GitHub**:
  - Frontend: ThinhLam2404/textenger-chat-fe
  - Backend: ThinhLam2404/textenger-chat
  - **Demo**: Textenger
  - **Tech Stack**: NestJS, TypeScript, MongoDB (Mongoose), Socket.IO, Google OAuth, JWT, Cloudinary, Nodemailer
